

PHARMA ANALYTICS DASHBOARD SCREENSHOTS

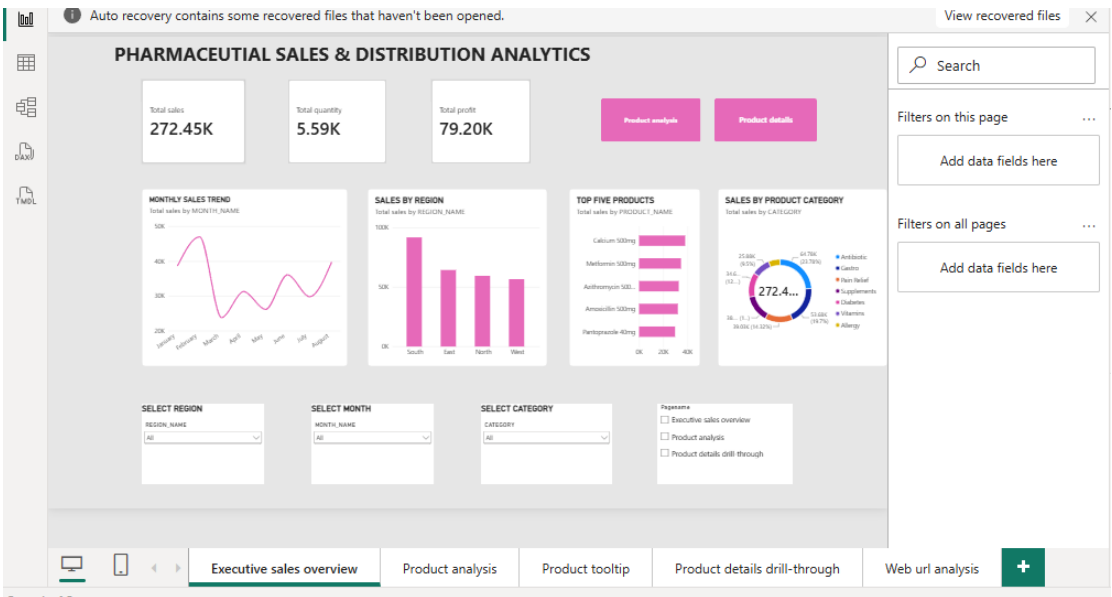

PREPARED BY: V.Tharshika

TOOL : Power Bi

PROJECT : Pharma analytics dashboard

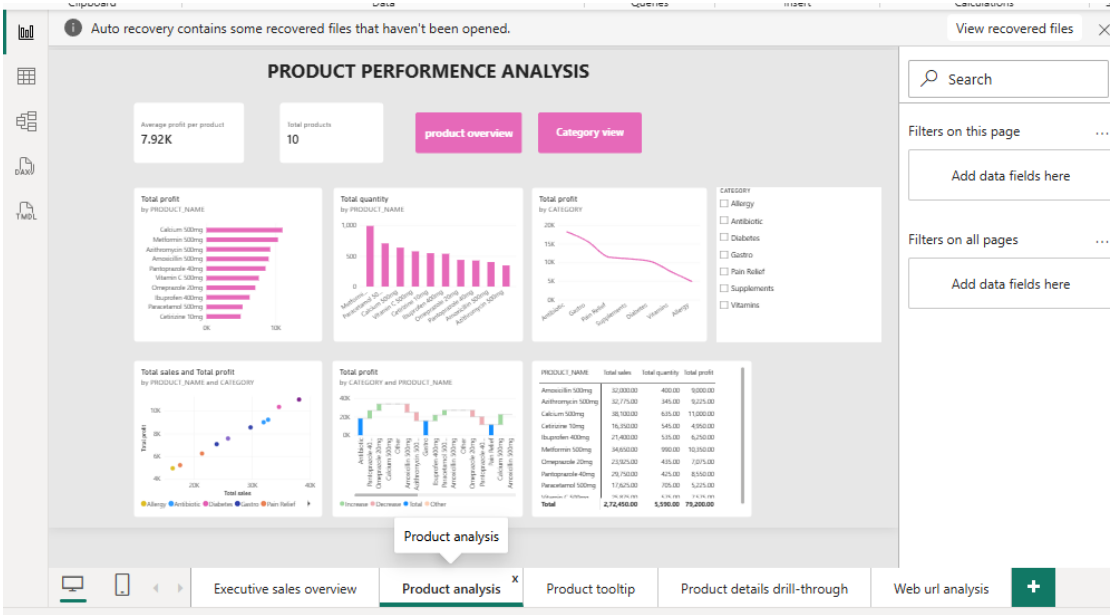

EXECUTIVE SALES OVERVIEW

The Executive Sales Overview page provides a high-level view of pharmaceutical sales performance. It includes key performance indicators and visualizations to help users understand overall sales, quantity, profit, and business performance.

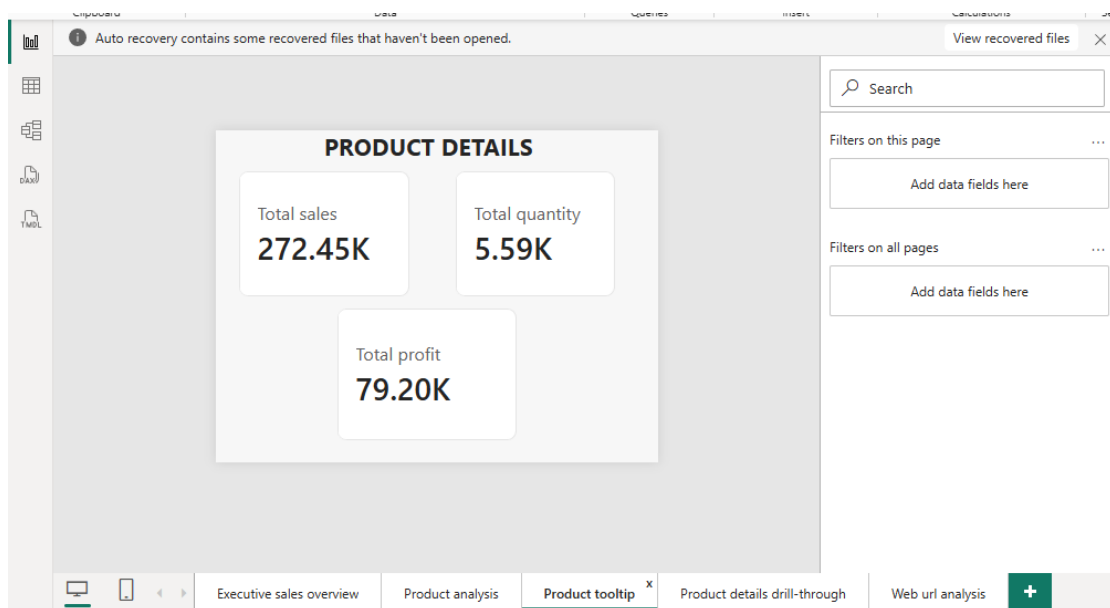

PRODUCT ANALYSIS

The Product Analysis page provides detailed analysis of product performance, including sales, quantity, profit, and category-wise performance. Bookmarks are also provided to switch between Product Overview and Category View.

PRODUCT TOOLTIP

The Product Tooltip page provides additional product-level information when the user hovers over a relevant data point. It displays Total Sales, Total Quantity, and Total Profit for the selected product.

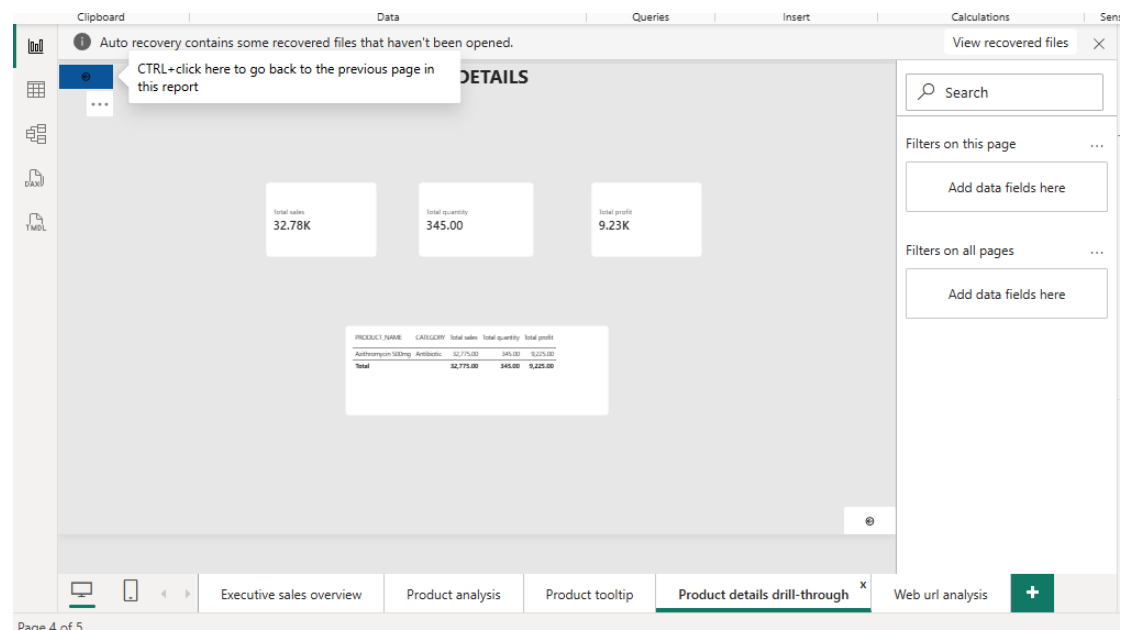

PRODUCT DETAILS-DRILL THROUGH

The Product Details page provides detailed information about a selected product using the drill-through feature. Users can navigate from the Product Analysis page to this detailed page by selecting a specific product.

How to Access

1. Go to the Product Analysis page.
2. Right-click on a product.
3. Select Drill-through → Product Details.
4. The detailed information for the selected product will be displayed.

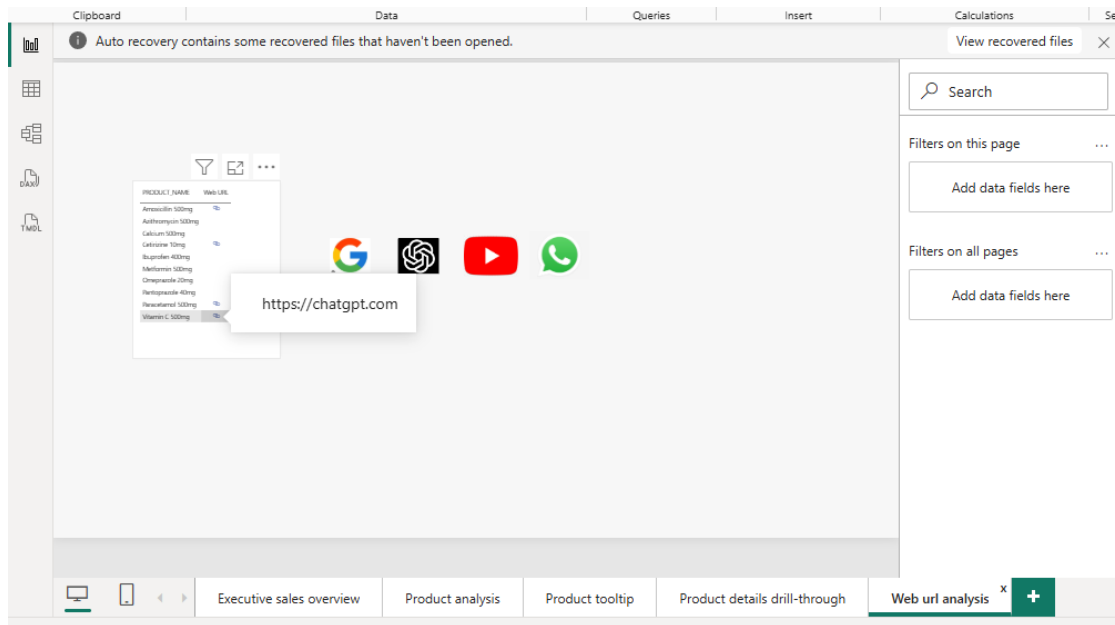

WEB URL ANALYSIS

The Web URL Analysis page provides clickable external web links for specific products. Different URLs are dynamically assigned to products using the DAX SWITCH function. Users can click the URL icon to open the corresponding web page.

How to Use

1. Open the Web URL Analysis page.
2. Locate the required product.
3. Click the URL icon.
4. The corresponding web page will open.

POWERBI SERVICE

The Pharma Analytics Dashboard is published to Power BI Service for online access and interaction. The published report allows users to view the dashboard and use its interactive features through a web browser.
